

## SWOT analysis

### Strengths

**Eye for details:** Since last semester I was told I have an eye for details when I'm designing.

**Responsible & reliable:** I am responsible and reliable. I attend every school day, because school is important to me and want to be present so that I don't miss anything. I communicate with my teammates when I am a little later.

**Supportive and solution-oriented:** I help my classmates when they are stuck by offering ideas or suggesting alternative approaches. I love helping others and this makes me a helpful classmate.

**Eager to learn:** Because I still have a lot to practice, I'm eager to learn more. I like to attend the many workshops that we get at school, this helps me explore more, for example using frameworks and PWA's. Sometimes I'm bummed that I can't attend every workshop, because I must work on my portfolio.

## **Weaknesses**

**Overthinking:** Sometimes I waste my time perfecting details, rather than moving forward and refining later.

**Difficulty starting tasks:** Sometimes I have a lot to do and then I don't know where to start because of that. And the things I don't like to do I delay.

**Procrastination with documentation:** I delay or take too long writing the documentation of the projects or portfolio processes.

## **Opportunities**

**Improving time management and planning:** It will help me to break projects into steps before I start a project with all the things I must include. Planning when I document will also be handy for me.

**Networking:** There are many opportunities in this branch to gain experience and grow contacts that will help in the future when graduated.

## **Threats**

**Falling behind on projects:** When there is no good planning it will cause stress when a deadline is near.

**Burnout:** When leaving things at the last moment it can lead to long working hours in the final days.
